

LED High Bay Light installation manual

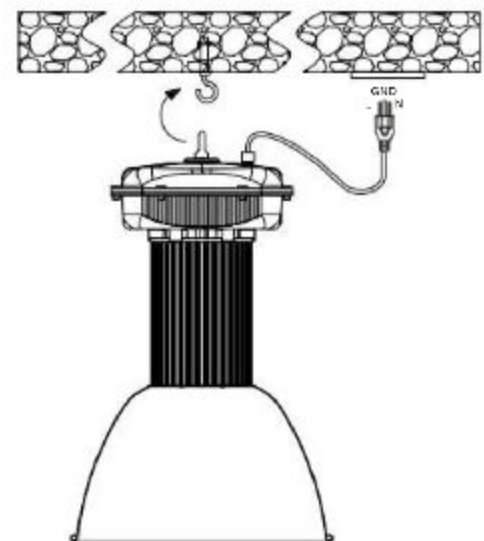

Application: Widely used in workshop, factory, warehouse, parking lot, toll station, supermarket, exhibition hall, stadium, etc.

Feature: No Pb, Hg or other pollution elements, long lifespan. 50-80% energy saving compared with traditional lamps, unique design.

1. Installation

Pic 1

Pic 2

Pic1/Pic2 are the installation diagrams of led bay light. Affix the reflector with 6 screws (in plastic bag) to the lamp body as (Pic 1) show above, tightening the screws by screwdriver. Hang up the light by the ring. Put the plug in for operation (Pic2).

2. Warning Note

- a) Please make sure all the power is turned off before installation is completed.
- b) Installation must be performed by skilled technicians who are familiar with technical requirements and proper installation methods of LED luminaire.
- c) Working Voltage: AC 100V~240/277V 50/60Hz. Do not exceed the operating voltage range.
